#1 SOURCE FOR STEEL

PRODUCTS AND SERVICES

Eddie Kane Steel Products, Inc., a New Jersey corporation, opened its first value-added processing facility in the Mahoning Valley (Masury, Ohio) in 2005. Today, in 2025, the company is eight facilities strong with its headquarters in Monmouth County, NJ (Sea Girt). Eddie Kane Steel's distribution and fabrication centers, strategically located across the United States, stock prime and non-prime hot-rolled steel plate and sheets: on- and off-gauge, pattern and nonpattern sizes, ranging in thickness from 16 Gauge to 12" thick.

Each one of Eddie Kane Steel facilities maintains a diverse inventory of steel plate and, for its strategic customer partners, stock inventory of commonly used grades and sizes as well as custom made parts. Value-added products include OEM parts, foundation anchoring components, counterweights, and burn outs for such industries as general building construction, transportation, agricultural and industrial equipment, mining, drilling, theatrical stage, elevator, sports and entertainment, and the waste industry.

Eddie Kane Steel's flagship processing facility in Ohio (180,000 SF warehouse and production plant) has a crane capacity up to 100 tons and has full rail access. The Brandenburg, KY, facility serves as the company's distribution center for heavy plate, primarily 2" - 14" thick.

Eddie Kane Steel's processing capabilities include high-definition plasma and oxy-fuel flame cutting (10' x 40' tables), shearing, bending, drilling, punching, welding, beveling, blanchard grinding, stress relieving, and light machining. Through close partnerships with vendors offering quality workmanship, we provide additional services such as coating and painting, leveling, slitting, and much more.

Eddie Kane Steel's diversified product range, processing capabilities, and regional facility locations benefit our customers time-wise and cost-wise. The company's general and skilled labor force, together with its dedicated sales and administrative staff and strong logistics department, translates to personalized, reliable customer service.
